DEV SINGH CHAUHAN

Full-Stack Developer

+91 96446 65727 | dev.dev.singh.chauhan@gmail.com | LinkedIn | GitHub | Portfolio

SUMMARY

Full-stack developer with a year of production experience shipping features end-to-end — React/Next.js on the front end, Node.js and Python with PostgreSQL, Redis and Prisma on the back end — plus self-shipped products running live in production, including a multi-tenant SaaS and GenAI applications. Comfortable owning a feature from data model to deployment, and quick to ramp on unfamiliar stacks.

TECHNICAL SKILLS

Languages: JavaScript, TypeScript, Python, SQL

Frontend: React.js, Next.js, React Native, Redux, TailwindCSS, HTML5, CSS3

Backend: Node.js, Express.js, REST APIs, Prisma ORM, NextAuth, authentication & RBAC

Databases: PostgreSQL, Supabase, MongoDB, Redis

AI: LLM API integration (Anthropic / OpenAI), RAG, generative AI applications

Cloud & DevOps: AWS, GCP, Docker, Vercel, Git, CI/CD, Agile

EXPERIENCE

Protiviti India Member Firm *Noida*

Technical Consultant *Jul 2025 – Present*

- Dedicated offshore engineer for a UAE government free-zone authority, owning production features end-to-end for its B2B marketplace and public website — data flow and API integration through UI, testing and release.
- Build React client extensions and custom fragments on Liferay DXP, integrating them with the platform's CRM and backend services to deliver complete user-facing workflows.
- Improve performance and maintainability across the extension layer, reducing page load times and simplifying handoff across the team.
- Work directly with an offshore client team in an Agile delivery model, translating requirements into scoped technical work.

Full-Stack Developer Intern *Feb 2025 – Jun 2025*

- Shipped React and full-stack features for a client project delivered to production on schedule.

Tutcart *Remote*

Full-Stack Developer Intern *Dec 2023 – Jun 2024*

- Joined as a founding-team engineer; built and maintained the MVP from the ground up across frontend and backend.
- Developed map-based search and discovery across the product.
- Built and optimized RESTful APIs and integrated third-party services; implemented authentication and role-based access control.
- Added video verification to strengthen user security; implemented Redux for state management across the application.

PROJECTS

Wedding Planner — Multi-tenant SaaS (PWA) *Live in production*

- Built a multi-tenant wedding-planning PWA (Next.js, Supabase/PostgreSQL) with tenant isolation enforced through row-level security (RLS) policies.
- Designed owner, editor and contributor roles enforced in RLS policies, so contributors edit only their own rows and private expenses stay visible to the owner alone.
- Designed the schema, auth and deployment pipeline solo; live and publicly accessible at **Wedding Planner**.

CorporateWayToSay — GenAI web app

- Built a web application that translates everyday language into corporate jargon using generative AI; handled prompt design and LLM API integration end-to-end.

TaskWise — Collaborative task management app

- Built a group task-management app (React Native + Appwrite) with task assignment, real-time tracking and push notifications; designed for scalable, secure backend services.

EDUCATION

B.Tech in Computer Science — Sagar Institute of Research & Technology, Bhopal *2020 – 2024*

CERTIFICATIONS

J.P. Morgan — Software Engineering Job Simulation (Forage) • Introduction to MongoDB (MongoDB)
